1. Applicant's election of Group II in the 12/1/04 response is noted.

2. Upon further review, the examiner notes that previously identified Group II actually contains two patentably distinct inventions itself, i.e., claims 13-15 which are directed to a subcombination (data buffer), whereas claims 16-21 are directed to a combination (a data buffer together with a frequency multiplier). Note further evidence claim 16 (it is evidence that the combination claims 16-21 are separately patentable from the subcombination claims 13-15) and the fact that the subcombination data buffer of claims 13-15 has separate utility.

Thus, the three originally filed separately patentable groups are as follows:

Group I: claims 1-12 and 22-27 (subcombination frequency multiplier);

Group II: claims 13-15 (subcombination data buffer); and

Group III: claims 16-21 (combination of a data buffer together with a frequency multiplier).

3. Applicant's election of one of these three groups is required, since the first two are subcombinations usable

together and patentably distinct, and the second two are combination/subcombination and also patentably distinct.
